

Technology and In/equality: Questioning the Information Society

Technology and In/equality explores the diverse implications of the new information and communication technologies through case studies of their applications in three main areas - media, education and training, and work. Questions of access to and control over crucial resources such as information, knowledge, skills and income are addressed drawing upon insights from science and technology studies, innovation theory, sociology and cultural studies. All of the chapters question the meanings of the terms technology and inequality and of the widespread association of technology with progress. Written with a non-specialist readership in mind, all complex theories and key concepts are carefully explained making the book easily accessible and relevant to a wide range of courses.
