

i-mode Strategy

First introduced in 1999, i-mode was the worlds first smart phone for Web browsing. The i-mode wireless data service offers color and video over a variety of handsets. Its mobile computing service enables users to do telephone banking, make airline reservations, conduct stock transactions, send and receive e-mail, play games, access weather reports and have access to the Internet. It can offer a wide array of websites from internationally known companies such as CNN to very local information. In Japan, the number of i-mode users is close to a sensational 13 million. This means that 10% of Japans total population are using i- mode after not even 2 years of its existence. i-mode Strategy authored by one of the main architects behind i-mode: * Discusses the success story of i-mode to date * Offers highly probable future projections for the technology Written by the most highly respected expert in the field, i-mode Strategy is an absolute must for everyone wanting to know more about NTT DoCoMos sustainable business model and i-mode strategy
